EXPERIENCE

Louisa AI

Principal Engineer

Mar 2025 - Present

Architected Space-Time Overlaps system processing 1.4B+ relationship records with AI-powered multi-dimensional scoring. Designed scalable Graph Service handling millions of email relationships with separated Worker/API layers for independent horizontal scaling. Leading React 18 migration while reducing Docker image sizes by 72%. Established Grafana K6 as company-wide load testing standard with automated CI/CD pipelines and self-hosted runners. Deployed organization-wide automated release management using Release Please. Champion AI-driven development practices including GitHub Copilot adoption and implemented enterprise-wide CI/CD improvements with automated security scanning and streamlined Git workflows.

Ollion

Lead Product Developer

Apr 2023 - Mar 2025

Core team of DataPipes - A cloud native Data Management Platform. Managed end-to-end code and infrastructure of microservices, led team of developers, and completed Vue2 to Vue3 migration. Represented product at international tech events.

Senior Developer

Apr 2022 - Apr 2023

Owned critical components, spearheaded Webpack to Vite migration, and collaborated with UX teams to enhance user experience and front-end performance.

Developer

May 2021 - Apr 2022

Led Javascript to Typescript migrations, optimized containerization, and developed web pages and REST APIs.

Cardinal Health

Associate Software Engineer

Jun 2019 - May 2021

Built architectural frameworks in NodeJS and React.js, deployed to Kubernetes, designed and launched Admin Console MVP, and served as technical interviewer for campus recruitment.

Software Engineering Intern

Jan 2019 - Jun 2019

Developed microservices using Serverless Framework and created shared repository of reusable modules.
